(54) Title: COIN HOLDER PARTICULARLY FOR EUROS

(57) **Abstract:** A coin holder comprises at least a through cylindrical seat (8), having a diameter corresponding to that of one of the coins in due course, within which is located, at a short distance (H) from the bottom (10), a stop elastic means such as an O-ring or elastic ring (14) that reduces the diameter thereto, so preventing the coins to fall down. It will be sufficient for the user to exercise by a single finger a slight pressure on the first coin of the stack to overcome the resistance provided by the elastic ring and to cause the fall of the coin that is located at the bottom of the stack.
